

42. (Amended) A method for facilitating electronic commerce through a network, said network comprising at least one server computer capable of communicating with a browser system located at a remote client computer, said method comprising:
- (a) receiving a first electronic standing order for one or more products or services;
  - (b) receiving a reminder specification for a reminder message;
  - (c) supplying said one or more products or services according to an order recurrence associated with said standing order; and
  - (d) providing said reminder message one or more times according to a reminder recurrence.
- 

93. (Amended) The order management system of Claim 92, wherein said first one or more suggested products or services comprise facilitating a payment between a debtor and a creditor.
94. (Amended) The order management system of Claim 93 wherein said reminder message comprises a message that said payment has been completed.
95. (Amended) The order management system of Claim 92, wherein said reminder message comprises a message that an event is about to occur.
96. (Amended) The order management system of Claim 95, wherein said event comprises the impending recurrence of said electronic standing order.
97. (Amended) The order management system of Claim 96, wherein said message facilitates modification of said electronic standing order prior to said recurrence.
98. (Amended) The order management system of Claim 95, wherein said message further facilitates purchase of a product or service related to said event from said electronic commerce system.
99. (Amended) The order management system of Claim 92, wherein said reminder messages comprises an electronic mail message.
